

Lecture 2

Reading a Character from the Console

```
Scanner input = new Scanner(System.in);  
System.out.print("Enter a character: ");  
String s = input.nextLine();  
char ch = s.charAt(0);  
System.out.println("The character entered is " + ch);
```

Comparing Strings

Method	Description
<code>equals(s1)</code>	Returns true if this string is equal to string <code>s1</code> .
<code>equalsIgnoreCase(s1)</code>	Returns true if this string is equal to string <code>s1</code> ; it is case insensitive.
<code>compareTo(s1)</code>	Returns an integer greater than <code>0</code> , equal to <code>0</code> , or less than <code>0</code> to indicate whether this string is greater than, equal to, or less than <code>s1</code> .
<code>compareToIgnoreCase(s1)</code>	Same as <code>compareTo</code> except that the comparison is case insensitive.
<code>startsWith(prefix)</code>	Returns true if this string starts with the specified prefix.
<code>endsWith(suffix)</code>	Returns true if this string ends with the specified suffix.

OrderTwoCities

Run

Obtaining Substrings

Method	Description
<code>substring(beginIndex)</code>	Returns this string's substring that begins with the character at the specified <code>beginIndex</code> and extends to the end of the string, as shown in Figure 4.2.
<code>substring(beginIndex, endIndex)</code>	Returns this string's substring that begins at the specified <code>beginIndex</code> and extends to the character at index <code>endIndex - 1</code> , as shown in Figure 9.6. Note that the character at <code>endIndex</code> is not part of the substring.

Finding a Character or a Substring in a String

Method	Description
<code>indexOf(ch)</code>	Returns the index of the first occurrence of ch in the string. Returns - 1 if not matched.
<code>indexOf(ch, fromIndex)</code>	Returns the index of the first occurrence of ch after fromIndex in the string. Returns - 1 if not matched.
<code>indexOf(s)</code>	Returns the index of the first occurrence of string s in this string. Returns - 1 if not matched.
<code>indexOf(s, fromIndex)</code>	Returns the index of the first occurrence of string s in this string after fromIndex . Returns - 1 if not matched.
<code>lastIndexOf(ch)</code>	Returns the index of the last occurrence of ch in the string. Returns - 1 if not matched.
<code>lastIndexOf(ch, fromIndex)</code>	Returns the index of the last occurrence of ch before fromIndex in this string. Returns - 1 if not matched.
<code>lastIndexOf(s)</code>	Returns the index of the last occurrence of string s . Returns - 1 if not matched.
<code>lastIndexOf(s, fromIndex)</code>	Returns the index of the last occurrence of string s before fromIndex . Returns - 1 if not matched.

Finding a Character or a Substring in a String

```
int k = s.indexOf(' ');  
String firstName = s.substring(0, k);  
String lastName = s.substring(k + 1);
```

Mathematical Functions

Java provides many useful methods in the **Math** class for performing common mathematical functions.

The Math Class

- Class constants:
 - PI
 - E
- Class methods:
 - Trigonometric Methods
 - Exponent Methods
 - Rounding Methods
 - min, max, abs, and random Methods

Activity

- Each table will get a Math Function
- Work as a team to look up the Math Function in Java Docs and know:
 - What do you need to put into the function to make it work?
 - What will be returned from the function?
- Report out to the class on what you found

MATH Functions

Trigonometric Methods

- `sin(double a)`
- `cos(double a)`
- `tan(double a)`
- `acos(double a)`
- `asin(double a)`
- `atan(double a)`

Radians

`toRadians(90)`

Examples:

```
Math.sin(0) returns 0.0
```

```
Math.sin(Math.PI / 6)  
returns 0.5
```

```
Math.sin(Math.PI / 2)  
returns 1.0
```

```
Math.cos(0) returns 1.0
```

```
Math.cos(Math.PI / 6)  
returns 0.866
```

```
Math.cos(Math.PI / 2)  
returns 0
```

Exponent Methods

- **exp(double a)**
Returns e raised to the power of a .
- **log(double a)**
Returns the natural logarithm of a .
- **log10(double a)**
Returns the 10-based logarithm of a .
- **pow(double a, double b)**
Returns a raised to the power of b .
- **sqrt(double a)**
Returns the square root of a .

Examples:

```
Math.exp(1) returns 2.71
```

```
Math.log(2.71) returns 1.0
```

```
Math.pow(2, 3) returns 8.0
```

```
Math.pow(3, 2) returns 9.0
```

```
Math.pow(3.5, 2.5) returns  
22.91765
```

```
Math.sqrt(4) returns 2.0
```

```
Math.sqrt(10.5) returns 3.24
```

Rounding Methods

- **double ceil(double x)**

x rounded up to its nearest integer. This integer is returned as a double value.

- **double floor(double x)**

x is rounded down to its nearest integer. This integer is returned as a double value.

- **int round(float x)**

Return (int) Math.floor(x+0.5).

- **long round(double x)**

Return (long) Math.floor(x+0.5).

Rounding Methods Examples

`Math.ceil(2.1)` returns 3.0

`Math.ceil(2.0)` returns 2.0

`Math.ceil(-2.0)` returns -2.0

`Math.ceil(-2.1)` returns -2.0

`Math.floor(2.1)` returns 2.0

`Math.floor(2.0)` returns 2.0

`Math.floor(-2.0)` returns -2.0

`Math.floor(-2.1)` returns -3.0

`Math rint(2.1)` returns 2.0

`Math rint(2.0)` returns 2.0

`Math rint(-2.0)` returns -2.0

`Math rint(-2.1)` returns -2.0

`Math rint(2.5)` returns 2.0

`Math rint(-2.5)` returns -2.0

`Math.round(2.6f)` returns 3

`Math.round(2.0)` returns 2

`Math.round(-2.0f)` returns -2

`Math.round(-2.6)` returns -3

min, max, and abs

- **max (a, b)** and **min (a, b)**
Returns the maximum or minimum of two parameters.
- **abs (a)**
Returns the absolute value of the parameter.
- **random ()**
Returns a random double value in the range [0.0, 1.0).

Examples:

Math.max (2, 3) returns 3

Math.max (2.5, 3) returns 3.0

Math.min (2.5, 3.6) returns 2.5

Math.abs (-2) returns 2

Math.abs (-2.1) returns 2.1

The random Method

Generates a random double value greater than or equal to 0.0 and less than 1.0 ($0 \leq \text{Math.random()} < 1.0$).

Examples:

```
(int) (Math.random() * 10)
```

Returns a random integer between 0 and 9.

```
50 + (int) (Math.random() * 50)
```

Returns a random integer between 50 and 99.

In general,

```
a + Math.random() * b
```

Returns a random number between a and a + b, excluding a + b.
