    int y = x;
    return &y;
}

int* bar(int x){
    int *ret = (int *) malloc(1 * sizeof(int));
    *ret = x;
    return ret;
}

int main() {
    int x = 3;
    int y = 8;
    int *px = foo(x);
    int *py = bar(y);
    printf("%d %d", *px, *py);
}

```

// Possible issues with this code?

printf: seg fault

issue: foo returns the address of a local variable which goes out of scope after foo returns, dereferencing this address is not valid so seg fault occurs

13.

```

int main() {
    int x = 12;
    int y = 3;
    int *pi;
    double *pd;
    // fill in the blanks
    pi = (int *) malloc(x * sizeof(int));
    pd = (double *) malloc(y * sizeof(double));
}

```

14.

```

int main() {
    int x;
    int *p;
    int y[] = {3,4,7};
    p = y;
    x = *p++;
    printf("%d %d", x, *++p);
}

```
